

July 28, 2008

Dear Members of the Washington State Board of Education,

Strategic Teaching would like to confirm that the Office of the Superintendent of Public Instruction (OSPI) has faithfully implemented the recommendations presented to the Washington State Board of Education in its report on July 14.

The final *Washington State High School Mathematics Standards* document includes the correct introductory material and the correct standards for Algebra I, Geometry, and Algebra II.

The minor variations that exist between this final document and previous draft versions are due to editorial corrections and negligible changes intended to clarify the performance expectations, examples, or statements in the document. The changes do not introduce new content or initiate a change of direction in the principles or ideas discussed in the standards document.

Strategic Teaching either suggested or approved all of changes.

Sincerely,

Linda Plattner
